

# Client Testimonials

We have had a Filtrex greywater system operating on our property for over 2 years and think it's great. I love the fact that we can catch rainwater, use it in the house and then in the garden, cutting down on our need for watering and the associated costs. Not only do we use Filtrex on our own property but as a small building company we have also recommended and arranged for Filtrex systems to be installed on a number of new homes. The maintenance of the system is simple and is well documented in the literature provided on installation of the greywater system. We have always found the customer service to be efficient and friendly and have enjoyed working with the team at Filtrex.

Regards Sally

---

We have had Filtrex grey and blackwater recycling systems installed in our home for the past two years and are delighted with the outcome. Our water consumption has decreased considerably with grey water looking after our ornamental plants and trees, plus our vegetable gardens and fruit trees - all of which are thriving. We have just planted lawn which will be watered with the blackwater, subsidised by grey if needed.

Personally we believe that all homes should recycle water and on numerous occasions have spoken to friends and acquaintances about our Filtrex system. We have no hesitation in recommending Filtrex Innovative Wastewater Solutions and were ourselves referred by a Filtrex customer (David Mattin of Pinjarra). The service we received pre-purchase, during installation and since installation have been second to none - prompt, professional and knowledgeable. The literature provided is easy to follow with well presented photos and diagrams.

The system is simple to maintain and from our point of view we do not feel that service contracts are necessary as we check the system regularly, clean filters, etc.

Whether living where we are and relying on our rainwater tank, or if living in a more suburban situation, we would not hesitate to have another Filtrex system installed.

Yours sincerely,

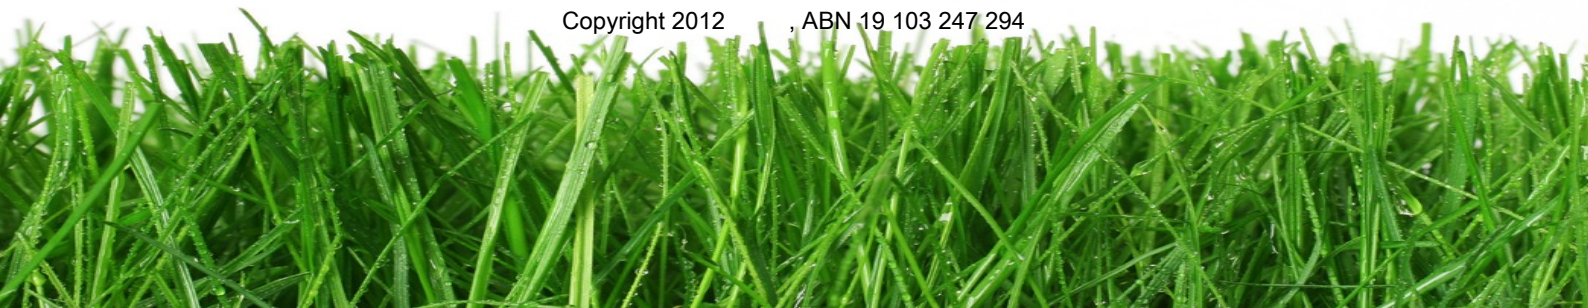

Graeme & Tracy

To Whom It May Concern,

After looking at various septic systems on the market the Filtrex Wastewater system was the obvious choice to complete our new home. No other system provided us with the financial and environmental benefits of the Filtrex system. With the grey water split system we have no ongoing maintenance contracts or service requirements. The Filtrex system is environmentally and family safe as there are no chlorine tablets to replace. With the dry WA climate we can still enjoy a great looking garden as the grey water is directed to the garden beds and lawn whilst lowering our water consumption also saving us money.

The staff at Filtrex were extremely helpful with product selection, shire approval through to installation and commissioning. Every thing was completed on schedule and in an efficient manner.

I have no hesitation in recommending a Filtrex Wastewater system to anyone considering building or upgrading there existing system.

Regards,

Mathew & Rebecca

Testimonial from Elaine and John , Lesmurdie

Firstly we have not actually moved into our house but the plan is to before Christmas.

We cannot comment on a reduction in water consumption since the greywater system was installed but will let you know in 6 months.

One of the reasons we chose Filtrex was the benefit of not having service contracts, but at the same time advice is readily available because Filtrex is a local company.

We have not really had to manage our Filtrex system yet, as it has not been utilised fully, but have read the literature and instructions appear easy to follow.

Filtrex provided us with great service and were very patient when Shire restrictions were stipulated in the early stages of choosing a system, the assistance and advice given was well above normal customer service requirements.

We would definitely install another Greywater System from Filtrex if the opportunity arose, based on the advice, installation and service given with this purchase.

Looking forward to moving in, and will give you further feedback in 6-12 months.

Thanks again

Kind Regards

Elaine and John
